Subject Index

Amide chromophores 375
Analytic continuation 341

BH, electronic structure and one-electron properties of ~ 171
Biomolecules, cation binding to ~ 151
Bonded atoms 129

Cage molecules, electronic structure of ~ 265
Carbon 45
Carbonyl chromophores 375
C_3H_6 ring molecule, ionization potential of ~ 85
$CH_3F_2^-$ 245
2-Chloroethyl and ethylenechloronium cations 385
C_2H_5N ring molecule, ionization potential of ~ 85
C_2H_4O ring molecule, ionization potential of ~ 85
CI calculations 9
Collision-induced predissociation 341
Complete basis sets 27
Completeness of basis sets 9
Configuration interaction, iterative NO's for ~ 305
Convergence of the RRM/CI calculation 27
Core hole states 45
Correlation energy 1
Criteria of convergence 9

Diatomic orbitals 351
Diels-Alder reaction, transition state geometry of ~ 219
Dipole moments 129
Direct minimization 421

Electric moments 109
Electron density 129
Energy space 9
Ethylene, *V-N* transition 1
Excited states 45

First-order wave function 201
First row elements, di- and triatomic molecules consisting of ~ 61
Formaldehyde 45, 421
Formamide, low-energy excited states of ~ 405
Formic acid dimer 323

Generalized perturbation theory 201
Geometry optimization, force method 245
Graph theory 223
Graphs corresponding to polyhedra 223

H_2, excited states of ~ 351
HCl 257
HF 257
H_2S dimer 77
Hybrid orbitals 139
Hydrogen bond 323
Hydrogen bonded systems 181

Ionization, core and valence ~, of hydrogen bonded systems 181

Landau-Zener model 341
LCAO, symmetry adapted 279
LiH_2, potential energy surface for 97
Lithium 45

MC method 45
MCSCF method, optimization by Brillouin's theorem 97
Methyl groups, dipole moment in ~ 215
Molecular one-electron properties, electronic and nuclear components of ~ 293

Natural orbital analysis 351
Natural orbitals for CI, iterative ~ 305
Non-interacting molecules, systems containing ~ 165
Nuclear magnetic shielding 109

Optical rotatory strengths 375
Orbital exponents 27

Phosphate group, binding of alkali and alkaline-earth cations to ~ 151
Polarizability 109
Populations 129
Proton affinities 77
Proton transfer 77
Pseudopotential MC SCF 421
Pseudopotential method 61

Reaction profile for interconversion 385

S_N2 reaction, frontside versus backside attack 245
Susceptibility 109
Symmetry-adaption formula 279
Symmetry coordinates 279

TiC, X-ray photoelectron spectrum of ~ 315
Two-electron functions 27

Vibrational structure 257

Water 45
Weak atomic interaction 399
Weak hydrogen bonds 77

X-ray spectrum of HCl and HF 257

EUROPE:
Now you can search ISI® data ON-LINE through ESA-SDS

You now can have immediate access via the ESA-SDS computer to 1,300 of the world's most important physics, chemistry and engineering journals—the same journals covered in the *Science Citation Index®*, *CC®/Physical & Chemical Sciences* and *CC/Engineering, Technology & Applied Sciences*.

Whether you're interested in—

- current awareness
- selective dissemination of information
- retrospective searching as far back as 1972

—the ESA-SDS computer will search the ISI data, find the information you want and deliver it *fast*.

All you need for this quick, on-line searching is a teletype or video-display terminal. You dial a number and are linked to the ESA-SDS central computer in Frascati, Italy.

ESA-SDS may be accessed by direct line with Frascati or by dialing through the PTT network to London, Brussels, Paris, Copenhagen, Darmstadt, or Rome. You can also dial via PTT lines to TYMESHARE in Brussels, Paris, Lausanne, London, or The Hague.

Find out more about how ISI data and ESA-SDS can make your literature searches faster, easier and more effective than ever before.

Mail the coupon below. Or contact David Raitt at the Space Documentation Service, ESA-SDS, Via Galilei, 00044 Frascati (Roma), Italy. Tel.: (Rome) 94 22 401; Telex: 61637 ESRINROM. Do it today.

Stereochemistry

Two Volumes

In Memory of van't Hoff

Topics in Current Chemistry/Fortschritte der chemischen Forschung
Managing Editor: F. Boschke

Volume 47

Stereochemistry I

40 figures. VI, 156 pages. 1974
Cloth DM 63,–; US $27.80
ISBN 3-540-06648-9

Volume 48

Stereochemistry II

15 figures. VI, 129 pages. 1974
Cloth DM 53,–; US $ 23.40
ISBN 3-540-06682-9

Prices are subject to change without notice

On the centenary of the publication in September 1874 of the work that laid the foundations of stereochemistry: "La Chimie dans l'Espace" by van't Hoff

Volume I

K. Mislow, D. Gust, P. Finocchiaro, R.J. Boettcher:
Stereochemical Correspondence Among Molecular Propellers
To be identified as a molecular propeller, a molecule must possess two or more subunits which can be considered as "blades" radiating from an axis of rotation. Furthermore each blade must be twisted in the same sense so as to impart a helical conformation to the molecules. (47 references)

J.H. Brewster:
On the Helicity of Variously Twisted Chains of Atoms
It is important to consider in some detail the geometric attributes of twisted chains of atoms regarded as irregular helices, because this is one of the significant ways in which the chirality of asymmetric atoms finds structural expression and becomes manifest. (18 references)

H.H. Wassermann G.C. Clark, P.C. Turley:
Recent Aspects of Cyclopropanone Chemistry
Cyclopropanones are highley reactive organic systems. They represent valuable substrates for studying theoretical aspects of the chemistry of small strained ring systems and are of special interest in synthesis because of the variety of transformations in which they take part. (132 references)

Volume II

J. Gasteiger, P.D. Gillespie. D. Marquarding, I. Ugi:
From van't Hoff to Unified Perspectives in Molecular Structure and Computer-Oriented Representation
Observable properties of molecules are determined from equilibrated ensembles of species differing in geometry and energy. This demands a representation invariant against changes of the latter features. Thus, it is necessary to use problem-oriented models for molecules, neglecting any properties that are irrelevant for a given problem. Such models represent equivalence classes of of molecules with a common characteristic feature. (35 references)

B. Vennesland:
Stereospecificity Biology
Virtually all biological reactions are stereospecific. (102 references)

F. Vögtle, P. Neumann:
[2.2]Paracyclophanes, Structure and Dynamics
Non-planer benzene rings, anomalous bond lenghts and angles, and electronic interactions between parallel benzene nuclei are common features of the [2.2] paracyclophane system. Chirally substituted [2.2]paracyclophanes offer interresting parallels of the stereochemistry of the metallocenes. (113 references)
